

- 1 1. A method for managing real estate information, comprising the steps of:  
2  
3 forming a real estate network with a top tier of one or more servers, at least one  
4 mid-level distributor tier, and at least one low-level back office tier;  
5  
6 configuring the one or more servers with the real estate information for  
7 distribution to the network;  
8  
9 enabling remote access to the servers at the mid-level distributor tier to manage  
10 the real estate information and to manage low-level back office tier access to the  
11 real estate information; and  
12  
13 enabling remote access to the servers at the low level back office tier to manage  
14 part of the real estate information.  
15
- 16 2. A method of claim 1, wherein the mid-level distributor tier comprises a  
17 newspaper.  
18
- 19 3. A method of claim 1, further comprising generating pages by HTML using  
20 database information.  
21
- 22 4. A method for managing real estate information, comprising the steps of:  
23  
24 forming a real estate network with a top tier of one or more servers and at least  
25 one low-level back office tier;  
26  
27 configuring the one or more servers with the real estate information for  
28 distribution to the network; and  
29  
30 enabling remote access to the servers at the low level back office tier to manage  
31 the real estate information.
